Erzhuo Wang (Section B) - erzhuow

Tim Giel (Section A) - tgiel

Members will be attending Section B for group meetings.

Money Club is a forum for people to come together, pool resources and invest in equities. Our aim is to provide a platform for communication between people to facilitate sound financial investment decisions. Money Clubs can consist of anyone you want to be associated with. It could be your family, friends or even people who you have only texted over the internet. The main aim is to share and gain knowledge about good investment decisions through sharing relevant information with the Money Club like good articles, links to web pages, images, personalized group messages and even group polls. Each group can have one owner. Permission from the group owner will be required to join the Money Club. The Money Club will also have a "Reputation" system to enable new users to identify existing members who have earned trust of other members of the group. This reputation system will be enforced by a leader board within the group which will have the top 5 contributors of the Money Club.

Reputation points can be gained by accumulating positive "Votes" on one's post inside the club. Points from one club cannot be transferred to another club to prevent new users in new clubs from being dominated by old members. The Money Club's main objective is to help people interact with each other and gain knowledge pertaining to sound investment. The groups in money club will have discussion forums where members can post about important happenings or upcoming events that might interest other users. These events will not generate "Reputation" but can help new users to get noticed. The users can also invite other members to the group but the group owner will have to verify the membership of the user under any circumstance. An existing user may be ousted from the money club by the club owner for spamming, improper conduct etc.

Technologies Used: Django (Python), Bootstrap for HTML/CSS, jQuery/ Javascript.
